PROFESSIONAL SUMMARY

Cybersecurity graduate (BSc Hons, 2:1) and CompTIA Security+ certified, seeking a Level 1 SOC Analyst position. Documented security investigations published on GitHub, alongside a self-built Wazuh SIEM lab. Over two years in professional security roles monitoring live environments on 24/7 shift rotations, triaging and escalating incidents under pressure and producing the accurate written records investigative work depends on.

TECHNICAL SKILLS

- **SIEM & detection:** Wazuh (deployed and configured), Microsoft Sentinel, Azure Log Analytics, Splunk; KQL query authoring, alert triage, detection rule logic and tuning
- **Security tools:** Nmap, Wireshark, Metasploit, Burp Suite
- **Operating systems:** Kali Linux, Windows 10/11, Linux command line
- **Scripting & development:** Python (Flask), Bash, SQL

CERTIFICATIONS

- CompTIA Security+ (SY0-701) — August 2026
- eJPT v2 — Junior Penetration Tester, INE Security — March 2025
- Google Cybersecurity Professional Certificate — Coursera, August 2024
- Cyber Threat Management — Cisco, November 2024

SECURITY INVESTIGATIONS & LAB WORK

- **SOC investigation write-ups (LetsDefend):** investigated simulated intrusions end to end — triaging alerts, tracing the attack chain from initial access to privilege escalation, and documenting the evidence, verdict and what I could not establish; published with screenshots on GitHub.
- **Ransomware incident investigation (KC7):** traced a ransomware deployment back to patient zero using KQL, identified the exfiltration tooling, then pivoted on attacker infrastructure to uncover a second domain and a compromised account.
- **Wazuh SOC home lab:** built and configured a Wazuh SIEM server with a monitored Linux endpoint; investigated SSH brute-force activity and file integrity monitoring alerts, analysing detection severity and how individual events escalate into correlated incidents.
- **HIL-PTF (dissertation):** built a full-stack web application (Python/Flask, SQLite, OpenAI API) integrating LLM assistance into a security testing workflow, with a human approval gate before any action executed.

PROFESSIONAL EXPERIENCE

Security Officer — A1 Security, St Albans

March 2026 – July 2026

- Sole officer responsible for continuous monitoring of a live environment: detected, triaged and assessed incidents, escalating in line with defined procedures
- Produced accurate incident reports and maintained occurrence logs, providing a reliable evidence trail and clean shift handovers
- Communicated incidents clearly to management, police and members of the public under time pressure

Security Officer — Aegis Support Services, Luton

August 2024 – February 2026

- Monitored corporate and school sites; access control, credential verification and alarm response
- Sustained night and weekend shift rotations, maintaining alertness and consistent reporting standards across long monitoring periods

EDUCATION

BSc (Hons) Cybersecurity — 2:1 — University of Bedfordshire, Luton

2023 – 2026

- **Key modules:** network security, digital forensics, incident response, ethical hacking, cryptography
